REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The instantly claimed method is free of the prior art because the prior art does not teach or suggest a method of isolating polysaccharides from bacteria as recited in the claims. The prior art methods most often used extraction with phenol which is troublesome and creates undesirable toxic waste. Other known methods in the prior art relied on the sole use of affinity columns. Gottlich and Schneerson teach a detergent and alcohol extraction, but do not use a deep bed filter to retain endotoxin nor do they teach a step after said filtration which involves adding alcohol to the filtered polysaccharide in order to precipitate it from the detergent remaining in the solution. It is noted that most filtration based separations involved retaining polysaccharides in the filter/column and did not involve using the flow-through solution. Hou et al. does not cure the deficiencies of the primary art references as it is directed to merely separating endotoxin through the use of a positively charged depth filter, i.e., through charge interaction. The prior art references do not teach mixing a bacterial polysaccharide with a detergent solution, addition of alcohol to a final concentration at which endotoxins are precipitated and which is below the concentration at which polysaccharides precipitate, mixing the solution, filtering the solution by way a deep bed filter wherein the endotoxins are separated and remain in the filter, and separation of the polysaccharide from detergent and alcohol.
